

Manual

Dosage:

Depending on the situation:

Piglets:

First week of life:
10 gram per litre water.

Around weaning:
5 - 10 gram per litre water.

Sows:
5 gram per litre water.

What should you see:

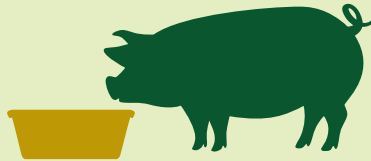

Piglets drink more water.

Piglets have an increased appetite.

Less piglets not eating after weaning.

OREXTROL® for sows

1

2

3

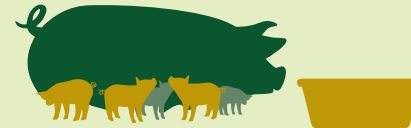

4

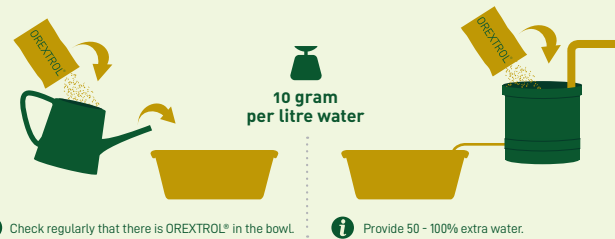

1 to 2 days until the sow eats well again.

OREXTROL® for suckling piglets

1

2

3

4

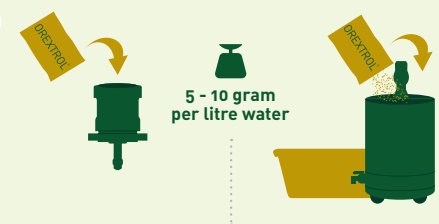

Start directly after birth with OREXTROL during 7 days.

OREXTROL® around weaning

1

2

3

4

Start 2 days before weaning until 3 days after weaning.

➤ How does OREXTROL® work?

OREXTROL® contains Umami and electrolytes. These ingredients stimulate the pigs appetite.

An improved appetite will lead to a growth in intake of feed, water and milk.

➤ When to apply OREXTROL®?

- During the first week of life to get a good start for the piglet and a healthy sow.
- Around weaning to improve feed intake.
- Sows with reduced feed intake to aid the return of their appetite.
